Ornit Blind Rivets has manufactured blind rivets since 1975. Ornit provides unique custom-designed fastening solutions for the automotive, constructive, electronic and industrial markets. Ornit's product lines are designed for a wide range of applications in all markets.

The company's portfolio includes structural rivets, roofing rivets, multi-grip rivets and other fastening devices made from various alloy combinations of aluminium, steel and stainless steel.

Quality

Ornit's high standards and top quality products are ensured by quality assurance procedures at all stages of production.

International Standards

Ornit manufactures in compliance with the IFI 114 and DIN 7337 standards. Ornit's dedication to performance excellence has led us to be awarded with the ISO/TS 16949 and ISO 9001:2000 certifications.

Research and Development

Ornit's R&D department is equipped with the latest technology and a highly experienced and knowledgeable team ready to face any challenge. Their expertise provides Ornit's customers with ideal solutions for any fastening application.

Customers

Ornit's products are exported around the world, i.e. Europe, Australia, South Africa, Far East and Latin America.

Ornit established a subsidiary company in the USA, Ornit Inc. to support the distribution of our products in North America.

Ornit is the leading distributor of fasteners in Israel.

Ornit's Vision

Ornit, a global company, remains on the front line in the fastening industry by researching, developing and manufacturing innovative fastening solutions.

Ornit's Objectives

- To continue to learn, understand and foresee the customers' changing desires and ambitions.
- To provide creative, flexible and competitive fastening solutions for customers worldwide.
- To maintain close business relationships with our customers.
- To remain uncompromising on product quality by implementing quality assurance regulations and maintaining international standards.
- To maintain high service standards by meeting our customers needs.
- To broaden Ornit's worldwide activities through product development.
- To invest in Ornit's human resources.

All You Need To Know To Choose The Best ORNIT Solution!

Q. What is a blind rivet?

Blind rivets are so called because they are designed to be installed from one side of the work area by a **single operator**. They provide solutions not only for truly blind situations where access to the rear of the rivet is impossible but also where work is of such size or shape as to make rear access at least inconvenient and would require a second operator. The rivet assembly consists of two parts: the rivet body, called an "eyelet," and the mandrel, or "nail." Gripped by the riveter's jaws, the mandrel is drawn into the body of the rivet, which is expanded and drawn into a tight clinch against the back side (blind side) of the joint material. When the assembly is tight enough, the mandrel breaks off at a predetermined tension and falls away. The result is a **strong, vibration resistant fastening**.

At Ornit we manufacture both non-structural and structural rivets. Structural rivets, such as Orlock, Ornilock, Or-Bolt and Super-Bulb are ideal for heavy duty structural applications due to their special locking systems, tougher mandrels and mandrel retention to enhance tensile strength.

Before Installation

After Installation

- * **Improved design strength** – the use of only a single, drilled or punched hole, filled effectively by an expandable, high shear strength rivet, offers a great increase in part design strength over screw/bolt with u-nut designs.

- * **Quicker assembly** – blind rivets are faster than other joining methods. Automatic feeding can deliver and set as many as 50 rivets per minute. Automatic, multiple set systems are used in some areas to set as many as 20 rivets at a time.

- * **Tooling** – the simplicity of riveting means, tooling can be designed to fit the application rather than making the design fit the tooling as most bolted and other types of joints require today. The installation tools may be manual (for field fixes), electric, air or hydraulic driven.

Manual tool

electric tool

hydraulic tool

Q. What are the main advantages of a blind rivet?

- * **Improved product design** – because the rivets are installed from one side only, the need for access to both sides of work, reinforcements, tapping plates, etc. is eliminated. No more required space for tooling clearance, holding tools, and other "back side" fixtures.

- * **Lower installed costs** – adding up the lower tool costs, maintenance costs, and labor saving, rivets are shown to be cheaper "in place" attachments.

- * **Lower inventory costs** – because rivets have wide grip ranges and are single item attachment parts, inventory cost savings are significant.

* **Better Quality joints** – since the rivet tool can't slip off the fastener as screw and bolt drivers can, there are no scratches and mars on the visible surfaces when riveting. Finally, the rivets are set, not torqued, so loosening from under-torturing and strippage are nonexistent.

Q. How to select the right rivets?

There are four basic factors to be considered in selecting the right rivet for a particular application:

1. Strength – Determine the shear and tensile strengths required for the application and then select a rivet that meets those requirements. Rivet strengths are a combination of rivet style (structural self-plugging rivets are much stronger than non-structural hollow or break mandrel rivets).

2. Rivet material – ORNIT blind rivets fall into the following groups:

* **Steel Blind Rivets** – Carbon steel is a durable metal alloy, forming powerful but light-weight fasteners and together with the clear passivation (CR VI Free) finish, are also weather and water resistant.

* **Stainless Steel Blind Rivets** – a corrosive resistant material, with a pleasing aesthetic appearance and when considering long term value, often is the less expensive material option. It's excellent anti-corrosive properties means that this type of material is ideal for highly corrosive environments.

* **Aluminium Alloy Blind Rivets** – Aluminium is a light-weight, cost effective material with an excellent weight to strength ratio.

3. Rivets Coating –

* **Steel Blind Rivets** are zinc electroplated.

Passivation types:

1. Clear: standard coating.

2. Black: interior and decorative uses.

3. Cataphoretic Finish: black superior finish used in the automotive industry.

The clear and Cataphoretic finishes are Cr+6-free. The black passivation is Cr-free.

* **Aluminium Alloy Blind Rivets** may be plain or painted. Paint coatings contain: epoxy resins, urea resins and pigments heavy-metals-free.

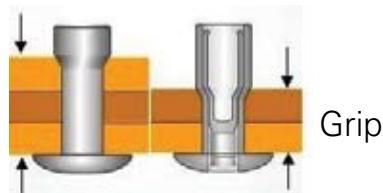

Our finishes are from the RAL spectrum. All of ORNIT finishes meet RoHS specifications.

4. Rivet head style – Ornit rivets are available as standard in the four head styles. The regular Dome/Protruding [D/P] head is used for most industrial applications. The Large [L] and Extra-large [X] heads are used for soft or brittle top sheets that require a wide bearing surface. The Countersunk [K] heads provide a completely flush surface on the finished assembly.

Dome/Protruding Large/Extra-Large Countersunk

5. Rivet size – The majority of Ornit's rivets are available the following diameters: 3.2, 4.0, 4.8, 6.4 mm. Ornit's structural rivets are also available in 7.8 mm diameter. To assure proper performance the selected rivet should be placed in the recommended hole size listed for the appropriate rivet diameter. The total thickness of the material to be joined is called the rivet's "grip". The grip range capabilities of each of Ornit rivet is provided in this catalog. Good design practice dictates that a rivet should not be used in material thicknesses which fall outside its grip range.

Q. How to identify Ornit Product by using catalog product code?

A. For example:

LN = Rivet Type
(e.g. ORLOCK Stainless Steel)

64 = Rivet Diameter
(e.g. 6.4 mm)

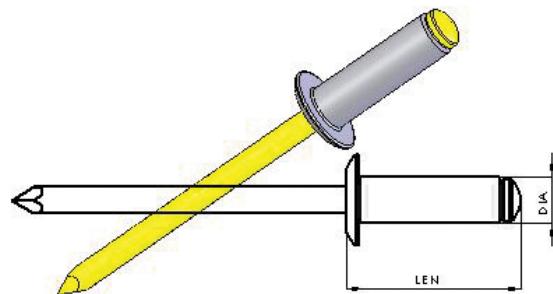

145 = Rivet Length
(e.g. 14.5 mm)

P = Head Type
(e.g. P = Protruding head)

LN64145P

Superior Peel rivet with locked mandrel.

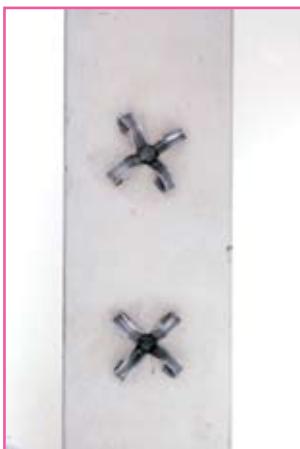

Key features include:

Features	Benefits
Peel tail.	Provides large blind side bearing area. Resistant to pull out loads in soft Materials
Extensive grip range.	Ideal for a wide variety of applications.
Locked mandrel.	Vibration resistant and enhanced shear values.
Grip of 100mm and higher.	Suitable for internal and external application of isolated panels.

Assembly Applications:

"The longest blind rivet in the world" (up to 10")

Best for roofing

Cast walls

cooling Truck Boxes

Body Material: Aluminium Alloy (3.0/5.0 Mg) to AA 5056/5154

Body Finish: Bright finish surface

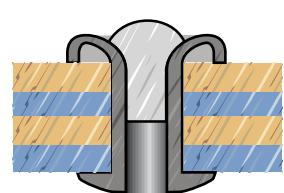

Mandrel Material: Low Carbon Steel SAE 1006-1022

Mandrel Finish: Zinc Plated Cr VI free

Or-Bulb

.....

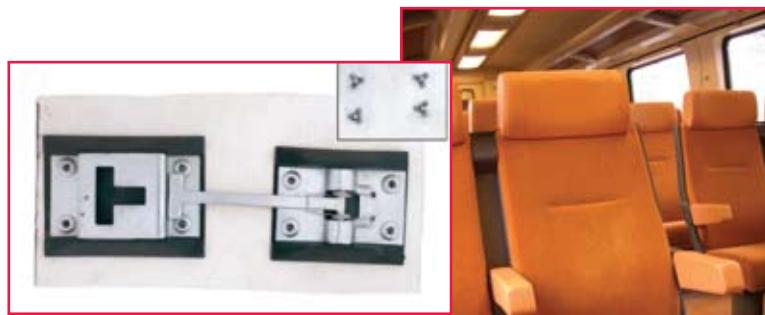

**Aluminium alloy fastener with split tail,
forming a large blind side area.**

Key features include:

Features	Benefits
Large blind side bearing area.	Spreads clamp load over a large area. Ideal for thin, brittle and soft sheet materials.
Good multi-grip performance.	Simplifies stock control. Reduces operator error. Accommodates a wide variety of material thicknesses.
Positively retained stem.	Secure, vibration resistant joint.
Wide choice of purpose designed installation tools.	Maximum production flexibility.

Assembly Applications:

Truck Box door holding

Fiberglass Applications

Car Dashboard

Train and bus seats

Or-Bulb

Dome Head

Body Material: Aluminium Alloy (2.0/2.5 Mg.) to AA 5052

Body Finish: Bright finish surface

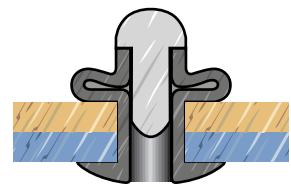

Mandrel Material: Aluminium Alloy (2.0/2.5 Mg.) to AA 5052

U-Fix

.....

Highly versatile, multi-grip fastener with a long, reliable track record.

Key features include:

Features	Benefits
Excellent multi-grip performance.	Simplifies stock control. Reduces operator error. Accommodates a wide variety of material thicknesses.
Excellent hole fill capabilities.	Ideal for oversized, irregular or misaligned holes. Creates a consistently high strength, vibration resistant joint.
Positively retained stem.	Secure, vibration resistant joint.
Available in a wide range of: Diameters (3.2mm-6.4mm), Head types (S, D, L, X, K) and Materials (Steel, Aluminium Alloy, Stainless Steel)	Suitable for a variety of applications.
Paint finishes (special order)	Complements adjacent, joint material colour.

Assembly Applications:

Bus Wooden Roof Assembly

Ladders

Automotive Tier 1 products

Pickup Truck Box Knob

Painted Rivets

.....

Option available to colour all aluminium type rivets with non-toxic paints. This service is available for standard sealed rivets, U-Fix, T.P.R, O.R.P, and Or-Bulb.

All the colours from the RAL catalogue are available on special request. These colours match the surrounding joint material, providing a neat, uniformed finish.

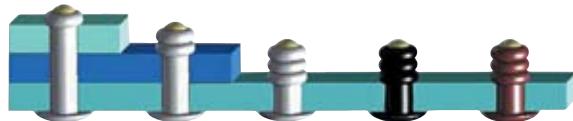

Superior, multi-grip performance, steel rivet.

Key features include:

Features	Benefits
Excellent multi-grip performance.	Simplifies stock control. Reduces operator error. Accommodates a wide variety of material thicknesses.
Excellent hole fill capabilities.	Ideal for oversized, irregular or misaligned holes. Creates a consistently high strength, vibration resistant joint.
Positively retained stem.	Secure, vibration resistant joint.
Large blind side bearing area.	Spreads clamp load over a large area. Ideal for thin, brittle and soft sheet materials.
Available in a wide range of: Diameters (3.2mm-6.4mm) and Head types (D, L, X, K)	Suitable for a variety of applications.

Assembly Applications:

Car Electric Windows Mechanism

Car Seat Track

Car Seat Mechanism

Bus Roof Assembly

Body Material: Low Carbon Steel
Body Finish: Zinc Plated Cr VI free

Mandrel Material: Carbon Steel
Mandrel Finish: Zinc Plated Cr VI free

Ornilock & Or-Bolt

.....

Multi-grip, structural breakstem fasteners, with internal (Ornilock) or external (Or-Bolt) locking mechanisms.

Key features include:

Features	Benefits
Excellent multi-grip performance.	Simplifies stock control. Reduces operator error. Accommodates a wide variety of material thicknesses.
Excellent hole fill capabilities.	Ideal for oversized, irregular or misaligned holes. Creates a consistently high strength, vibration resistant joint.
Positively retained stem.	Secure, vibration resistant joint.
Visible locking element.	Quick, easy inspection.
Optional decorative caps.	Enhances corrosion and water resistance properties. Complements adjacent, joint material colour.

Assembly Applications:

Satellite Dishes

Steel floor Fastening

Cooling systems

Pedestrian Bridges

High strength breakstem fastener with excellent bulb-tail formation.

Key features include:

Features	Benefits
High shear and tensile strengths.	Secure, vibration resistant joint. Positively retained stem.
High heat durable properties.	Ideal for applications with elevated temperatures.
Good hole fill capabilities.	Ideal for oversized, irregular or misaligned holes. Creates a consistently high strength, vibration resistant joint.
Large blind side bearing area.	Spreads clamp load over a large area. Ideal for thin, brittle and soft sheet materials.

Assembly Applications:

Car Door Mechanism

Communication Cabins

Industrial Ventilator

Steel frame construction

Stelock

Dome Head

Body Material: Low Carbon Steel

Body Finish: Zinc Plated Cr VI free

Mandrel Material: Carbon Steel

Mandrel Finish: Zinc Plated Cr VI free

Orlock

.....

Structural, breakstem fastener, with unique double locking system and exceptional shear and tensile strengths.

Key features include:

Features	Benefits
Double locking system	Secure, vibration resistant joint. Enhances water and vibration resistant properties.
Positively retained stem.	Secure, vibration resistant joint.
Large blind side bearing area.	Spreads clamp load over a large area. Ideal for thin, brittle and soft sheet materials.
Available in a wide range of: Grip Ranges (up to 39.5 mm), Head types (P, L, X, K) and Materials (Steel, Aluminium Alloy, Stainless Steel)	Suitable for a variety of applications.
Optional decorative caps.	Enhances corrosion and water resistance properties. Complements adjacent, joint material colour.

Assembly Applications:

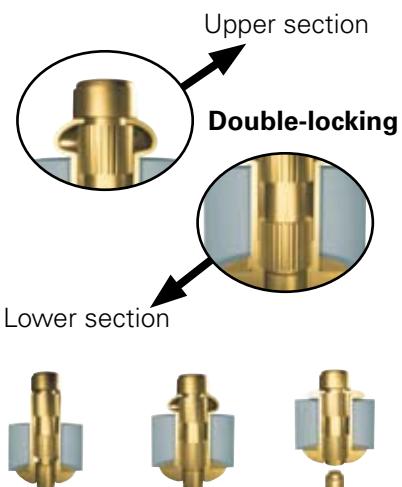

Truck Box Aluminium Frame

Steering Wheel Mechanism

Car Ventilator

Train Wagon Assembly / Repairs

Orlock Steel

Protruding Head

CAPPUCHON

Plastic caps fit over the head of the rivet before rivet installation, the rivet is installed and then the plastic cap is closed.

Advantages:

- Matches the surrounding joint material, providing a neat, uniformed finish.
- Enhances water resistant properties.
- Fast and easy installation.
- Available in a wide selection of colours.
